Mitsubishi Electric EW270U: 3-D home cinema for beginners

EW270U is the designation for the new DLP projector that opens the door to 3-D technology for home cinema fans at a price of less than 1,000 euros. And this powerful projector from Mitsubishi Electric is extremely well equipped for professional applications as well. Its WXGA resolution and the outstanding image optimisation features set new standards in this category. The unit's functions range from Wall Screen and Brilliant Colour to reproduction of 3-D content, while the 2,000:1 contrast ratio and high light output of 2,600 ANSI lumens protect the image from virtually every imaginable external influence. Noise emissions of 29 dB in Low Mode underline the manufacturer's expertise in the development of low-noise projectors.

Password protection, a metallic anti-theft security anchor and the Instant Shut Down function are some of the specialised features that make the EW270U suitable for professional use. In this context, it is equally well adapted for operation in both mobile applications and permanent installations. Full network compatibility (Creston compatible) and digital HDMI input make it the device of choice for equipping conference rooms and classrooms. Whether for private home cinema use, for the transmission of soccer matches or in a professional or training context, the EW270U testifies to Mitsubishi Electric's expertise in developing versatile projectors that satisfy demanding performance specifications at a fair price.
