

### **Mitsubishi Electric EX200U:**

#### **Spectacular lightweight**

The new EX200U from Mitsubishi Electric is a high-performance digital projector that is also ready to satisfy home cinema needs. In particular, the operating noise of just 29 dB in Low Mode ensures undisturbed viewing pleasure for film lovers. This DLP projector delivers a 1250:1 contrast ratio with a high light output of 2300 ANSI lumens. Its XGA resolution and its many functions for the optimisation of presentation display such as Brilliant Color enable it to generate brilliant, high contrast images. And adjustment of the image for walls of different colours is completely automatic with the Wall Screen function. Even though it's equipped with so many features, however, the EX200U is always convenient and easily portable thanks to its low weight of just 2.4 kilograms.

The Instant Shutdown function shortens the time it takes to pack up after the presentation and increases mobility in the professional context. But the EX200U is ideally equipped for stationary use as well. Password protection and a metallic anti-theft security anchor discourage light-fingered thieves. At the same time, the long service life of the lamp and the low energy consumption of the projector keep operating costs low. Today's energy conscious users will appreciate this unit's power requirement of less than one watt in standby. And last but not least, its compatibility with the usual PC and video standards makes the EX200U an ideal partner for professional use – and one with real star power on the home cinema scene, too.
